

Install instructions

1. After you download the .rar package, it is located in the Downloads folder on your computer or in that folder that you specified for storage. You need to right-click on the package to unzip the package. A new folder named ADYS Regular & Bold free font will then be created.

2. Then open this folder, on the ADYS-Regular-V5-4.ttf file, right-click and select "Install". It takes less than a second and the file is already installed. Repeat for ADYS-Bold-V5-4.ttf. Now when you open Word, Excel, PowerPoint, a graphics or other program you are working with, you can select Adys from the font selection drop-down menu.

2. Everything related to the application of the font and for what purposes you can use it can be found in the EULA License file.
